

Mining Strategy Addendum

Effective 21 September 2026 | Current strategy notice

Scope: mining location, energy source, deployment scale and operating assumptions only.

Current status

MINEFI is reviewing the final site, energy source, deployment scale and operating structure for its planned Script mining infrastructure.

References in earlier materials to Abu Dhabi, a 1,000-unit Antminer L9 fleet, immersion cooling and the associated Year-1 CapEx are historical planning assumptions. They should not be interpreted as a confirmed deployment commitment.

No replacement location has been publicly confirmed. Updated assumptions will be published only after the relevant technical, commercial, legal and regulatory diligence has been completed.

What this addendum does not change

- vMNFI remains virtual, off-chain and stored against the user's MINEFI account.
- Existing vMNFI balances are preserved.
- TGE remains TBA and claiming remains locked until TGE.
- The fixed \$MNFI supply, allocation, sale terms and vesting terms are not changed by this notice.
- This notice does not authorize mainnet deployment, token sale, mining-facility procurement or public disclosure of any unapproved replacement site.

Document precedence

For mining location, energy source, fleet size and CapEx status, this addendum supersedes conflicting statements in earlier Whitepaper, One-Pager, Pitch Deck, Tokenomics and application materials. Those editions remain preserved as historical strategy documents.

Updated documents will be issued as new versions after the revised mining strategy passes its approval gates.

Not financial, investment, legal or tax advice. Plans and estimates may change.
